Welcome to Professional Power Without the Compromise

Thank you for choosing the PG3600. You've invested in a power solution built for demanding work, where reliability, performance and portability matter every day. Whether you're replacing a noisy generator or upgrading from an underpowered consumer battery pack, the PG3600 is engineered to keep your tools running and your projects moving.

Warranty

To activate your full 2-year warranty, please scan the QR code below or visit the registration link and complete the customer information form. To qualify for the full warranty, registration must be completed within one week of delivery of your unit.

<https://gogrid.uk/warranty>

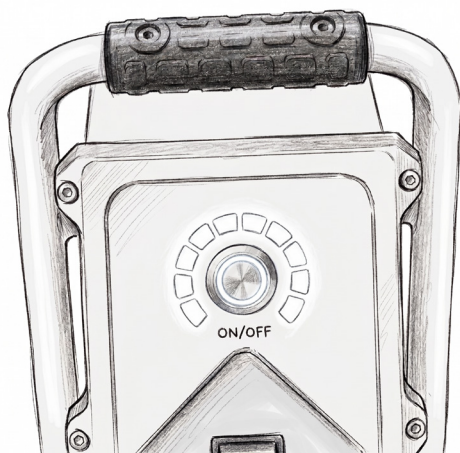

Company number: 17274829

Using the unit

Step 1

Press the On/Off button to initiate the self-test sequence. The LED lights will pulse white until the self-test is complete.

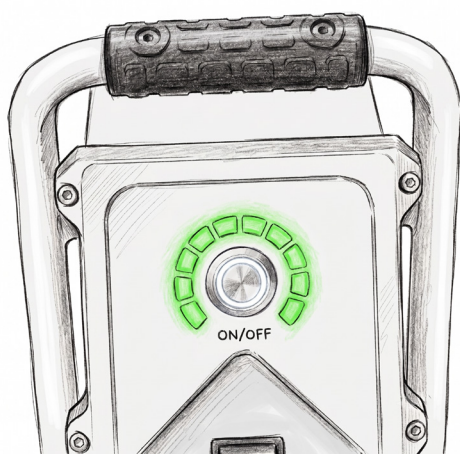

Step 2

Once the white LEDs are illuminated steadily (not pulsing), press the On/Off button again to enter Power Mode. The LEDs will turn green when the unit is ready for use.

Each flashing LED represents 10% of the battery's charge. For example, if three LEDs are flashing, the battery is approximately 30% charged.

When the battery level is between 1% and 10%, the first LED will illuminate yellow to indicate a low battery.

Accessing use data via the app

Step 1

Download the PowerGiant app to your phone by scanning the QR code below or using the download link provided.

<https://gogrid.uk/apps>

Charging the unit

Step 1

Insert the charging lead into the charging port. It is designed to fit in only one direction, so do not force the connector.

Step 2

Rotate the connector clockwise to lock it into place.
